Dons faits à l'Institut météorologique	193

FORORD.

I den 5te Aargang af Norsk meteorologisk Aarvog meddeles lagttagelser for det meteorologiske Aar 1870—71 for de samme Stationer som i den foregaaende Aargang, med Undtagelse af Tromsø.

Iagttagelser fra Tromsø Station ere siden November 1870 ophørte at indkomme til Institutet. For saavidt muligt at fylde det derved opstaaede Hul i Stationernes Række er der for Aargangen 1870—71 meddelt iagttagelser fra Fuglenes Fyrstation ved Hammerfest for December, Januar og Februar, og fra Telegrafstationen i Bosekop i Alten for de følgende Maaneder.

Disse iagttagelser ere udførte med gode Instrumenter, der ere verificerede baade ved Institutet og under Inspektionsreiser, sidste Gang i Juli 1871.

Iagttagelserne fra Fuglenes ved Hammerfest ophørte ved Slutningen af Februar. Iagttagelserne fra Bosekop i Alten bleve i Marts, April, Mai, Juni, Juli og August udførte af Distriktslægen paa Stedet.

PRÉFACE.

Dans le 5^{ième} tome des annales de l'institut météorologique de Norvège sont données les observations pour l'année météorologique de 1870—71 des mêmes stations que pour l'année précédente à l'exception de Tromsø.

Les observations de la station de Tromsø ont fait défaut depuis novembre 1870. Pour combler cette lacune dans la série des stations on a donné pour l'année 1870—71 des observations du phare de Fuglenes, près de Hammerfest, pour les mois de décembre, janvier et février, et de la station télégraphique de Bosekop à Alten pour les mois suivants.

Ces observations sont faites avec des bons instruments, qui ont été vérifiés soit à Christiania soit pendant mes voyages d'inspection, la dernière fois en juillet 1871.

Les observations de Hammerfest ont été discontinuées à la fin de février. Les observations d'Alten ont été faites par le médecin du lieu dans les mois de mars, avril, mai, juin, juillet et août. L'hau-

Tabellerne, der indeholde Observationerne for det meteorologiske Aar 1870—1871, give for hver Station og Maaned:

- 1) Barometerhøjden i Millimeter, rettet for Instrumenternes Fejl og reduceret til 0° C., men ikke til Havets Overflade.
- 2) Luftens Temperatur efter det hundredgradede Thermometer. Temperaturer over 0° staa uden Fortegn.
- 3) Vanddampenes Tryk i Millimeter.
- 4) Den relative Fugtighed i Procenter.
- 5) Vindens Retning (retvisende) og Styrke. Styrken er betegnet efter følgende Scala: 0 = Stille; 1 = svag; 2 = laber, frisk Bris; 3 = frisk (Kuling); 4 = sterk; 5 = Storm; 6 = orkanagtig Storm.
- 6) Skydækket. 0 = klart; 10 = overskyet.
- 7) Nedbør. Regn eller Sne (smeltet) — Højden i Millimeter.
- 8) Anmerkninger.

Tabellerne for Christiania indeholde desuden:

i 2den Rubrik. Den laveste og høieste Temperatur i Døgnet. Naar Temperaturen i hele Døgnet har stadig steget eller faldt, staa denne Rubrik blank.

i 5te -- Vindens Middelhastighed i Døgnet, regnet fra Kl. 10 Formiddag, udtrykt i Kilometer i Timen.

i 6te — De øverste Skyers Drift, regnet som Vinden.

i 7de — Himmelens Udseende, Nedbør, Skyernes Form og Skydækkets Størrelse.

Den nederste Horizontalrække indeholder de maanedlige Middeltal og den samlede Regnhøjde.

H. M O H N.

Les tableaux qui contiennent les observations de l'année météorologique de 1870—1871 donnent pour chaque station et chaque mois:

- 1° La hauteur barométrique en millimètres corrigée des erreurs des instruments et réduite a 0°, mais sans réduction au niveau de la mer.
- 2° La température de l'air d'après le thermomètre centigrade. On a omis le signe +.
- 3° La tension de la vapeur d'eau en millimètres.
- 4° L'état hygrométrique en centièmes.
- 5° La direction vraie et la force du vent. Les désignations pour la force sont les suivantes. 0 = calme; 1 = faible; 2 = modéré; 3 = assez fort; 4 = fort; 5 = très-fort; 6 = tempête ou ouragan.
- 6° La quantité des nuages. 0 = serein; 10 = couvert.
- 7° La hauteur de pluie (ou de neige fondue) en millimètres.
- 8° Des remarques.

Les tableaux pour Christiania contiennent de plus:

Colonne 2. Les températures minima et maxima du jour. Quand la température pendant tout le jour a été continuellement en montant ou en baissant, cette colonne reste en blanc.

— 5. La vitesse moyenne du vent pendant le jour, exprimée en kilomètres a l'heure. Le commencement du jour est à 10 heures du matin.

— 6. La direction du mouvement des nuages supérieurs exprimée comme celle du vent.

— 7. L'état du ciel, les météores aqueuses, la forme et la quantité des nuages.

La dernière ligne horizontale contient les moyennes mensuelles et la quantité totale de la pluie.
